MSE-6 Wheel Hubs for Traxxas Bandit
Designed by: StarWarsBricker - Matt Hobbs

Notes:

- Will require carving out some of the tire foam as the inner hubs had to be flared out to clear all the chassis components of the Bandit.
- Use the [TMRacing MSE-6 Droid Foam Tires](#).
- Wheels are based on the TinyP wheels with Traxxas Bandit mounts.

Update June 6th, 21017

It has been found that you will need to move your shocks in by one hole on the lower arms in order for these rims to spin without hitting anything.

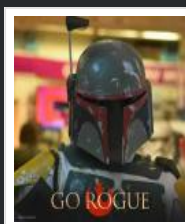

Right on!!! That looks great! Thank you Tiny & Matt!!

I just posted a link in the Facebook group 😊

Thanks for making this. I don't have a 3 D printer so I thought about using Shapeways to print them. When I enter the file it says it's for the front wheel hubs, is there a separate file for the wider rear wheels also?

There are 4 stl files in that zip file. I just checked and they are all there.

I probably need to do this from the computer instead of my phone. Just not seeing an option to choose from on Shapeways page by phone.

You should talk to people locally to you to see if someone has a printer. It will be cheaper for you that way. There are a lot of Public & College libraries now that have a couple of printers. Also, look for a local hackerspace to see if you can use one as well. While you are at it ask them for some training on how to use the equipment. Let it be a learning experience.

I had a garrison mate print these up for me. They're really nice! Thanks for making the files available!

I have to use shapeways to print these (or some other online option). Was going to purchase them tonight but was worried I may have the wrong information clicked. It's asking for the measurement type. I am assuming the wheel parts are in mm correct? And I need each part for the traxxas bandit x2? Trying to get parts in asap, so I can start building and hope to test before next con locally and worried I am going to mess up because it is so hard to follow info.
